

Description	Value	Background: After several DDoS attacks happened in the last month, the leadership team wanted to determine whether investing in Microsoft Azure DDoS Protection Network (\$36,000 per year) is financially justified.
Threat Event Frequency (TEF)	30	
Susceptibility	0.2	
Primary Loss (\$)	\$30,000	
Secondary Loss (\$)	\$15,000	
Reduction in success rate (control)	91%	
Control Cost (\$)	\$36,000	
Loss Event Frequency (LEF)	6	Note: Only the values in rows 2-7 should be edited.
Annualised Loss Exposure (ALE)	\$270,000	
New LEF after control	0.558	
New ALE after control	\$25,110	
Total Annual Cost with Control	\$61,110	
Savings	\$208,890	

Option	Annual Loss	Control Cost	Total Cost	Net Savings	Conclusion: Investing in Microsoft Azure DDos Protection Network saves about \$209,000 annually, offering a significant positive return on security investment (ROSI).
Without Control	\$270,000	\$0	\$270,000	—	
With Control	\$25,110	\$36,000	\$61,110	\$208,890
